

The new **rotaflex** is the most effective method of cleaning and maintaining mill spouts and pipes available in the market today.

**Major features of the Rotaflex™ System are:**

Low cost • Very robust and portable • Simple to use • One man operation • Variable speed control • Cleans pipe lengths from 6-60m and diameters from 4-400mm • Adapts to clean chillers, condensers, boilers, drains, ductwork • Variety of tool heads to suit a variety of deposits, dimensions and blockages.

**Our overseas clients say:**

“Using Rotaflex™ on a regular basis makes life much easier. It is an essential mill accessory.”  
*Essa al Ghurair of the Dubai National Flour Mills*

“A most valuable aid in maintaining high standards of mill hygiene. Highly recommended.”  
*Bachar Boubess, Modern Mills of Lebanon*

“A very good machine and excellent customer care.”  
*Irani Brothers, Ghana*

Rotaflex Unit

**The Solution**

The Rotaflex system allows the cleaning of 8 - 12 meter length of pipe in approximately 30 seconds. All the spouts in a sifter mill can be thoroughly cleaned in a one day shut down, irrespective of configuration diameter, length or consistency of deposit. The spouts no longer need to be fumigated. The wide range of brushes, tool heads and variable speeds available ensure the pipe remains free from damage.

**The Problem**

Condensation build-up of flour, wheat and rice in the transfer pipe work can lead to infestation as well as total blockages through which fumigation gases cannot penetrate. Current methods can take 30 minutes to clean one length of pipe. The use of rods & brushes, weights, pull through or rubber hammers to free deposits can lead to irreversible damage and expensive replacements.

Foot control paddle

Blocked up pipes which fumigation gases cannot penetrate.
